Stanley Nelavala

AI Engineer (New Grad): Agents, Evals, Guardrails and Payments

218-213-8220 | consultantstanleymn@gmail.com | LinkedIn | GitHub | stanley-n.com
Huntington, IN | Open to relocate anywhere

Summary

AI engineer with an M.S. in Computer Science (4.0 GPA) and one year at a 10-person startup, who turns LLMs and agents into reliable features: human approval before consequential steps, 62 replay evals, prompt-injection tests, guardrails and LLM failover. I also build money-path systems that stay correct under retries (idempotency, outbox, exactly-one-winner decisions). I judge where AI helps and where it adds risk, I measure output quality, and I code with Claude Code, Codex and opencode every day. AWS Certified Solutions Architect, Associate.

Experience

Software Development Engineer Nov 2025 – Present
Mass Technologies, team of 10 (RxApps360 hospital platform, pre-launch; numbers from dev and test) *Huntington, IN*

- Built RxDesign, the hospital design service (FastAPI, React, TypeScript) with a deterministic, rule-based layout engine and an LLM setting; 220+ offline tests on the API run with fake models, so tests never call an LLM.
- Designed, built and integrated into every platform module the signed service-to-service API (M2M): each call proves which service and tenant sent it. After a security audit, hardened it with a Redis rate limiter and replay protection.
- Replaced offset paging with keyset paging on the catalog device list: row 150,000 of a 328,000-device dev database fell from 285 ms to 0.20 ms. Cut the planning Items page from 3 API calls and 162 KB to 2 calls and 37 KB with typeahead search.
- Fixed a regular expression denial-of-service bug (138 s on an 80-character input); the new pattern matched the old results on 60,000 random inputs.
- Built the RxAsset iOS and Android app (React Native, Expo) with scan-to-search and an on-device voice assistant; standardized malware scanning of uploads (GuardDuty) across 9 app modules.
- Use Claude Code, Codex and opencode every day, and help set the checks that keep agent output correct: tests and written acceptance checks gate every change.

Adjunct Faculty (part-time) Jan 2026 – Aug 2026
The College of St. Scholastica *Duluth, MN*

- Taught Programming II (Java) and Machine Learning for Data Science.

Graduate Research Assistant and Teaching Assistant Aug 2023 – Aug 2025
University of Minnesota Duluth *Duluth, MN*

- Built a pipeline (Python, Node.js, MySQL, FFmpeg, PaddleOCR) that collected and analyzed 1M+ TikTok videos from 300k+ authors for thesis research on misinformation, then grouped themes with BERTopic; presented at the UMD CS graduate poster session.

Projects (public code, tests)

Agent Integration Platform | *Python, FastAPI, LangGraph, MCP, PostgreSQL (pgvector), Redis* GitHub

- Multi-step case agent with typed state, one constrained MCP write tool, human approval that resumes after restart, and step and token budgets; hybrid retrieval with access labels.
- 62 deterministic replay evals, prompt-injection tests, output guardrails, PII redaction, an append-only audit log; failover between two LLM adapters with a circuit breaker and token cost records.

Payments Ledger Service | *Java, Spring Boot, PostgreSQL, React, TypeScript, k6* GitHub

- Double-entry ledger (authorize, capture, void, refund, transfer) with idempotency keys and a transactional outbox; property tests and a k6 check that no money is created or lost; 28-day error budgets.

Card Dispute Service | *C#, .NET 10, PostgreSQL, EF Core, xUnit* GitHub

- Dispute state machine where two racing decisions give exactly one winner (PostgreSQL xmin optimistic concurrency); idempotent create; tests written first.

Skills

AI and agents: LangGraph, MCP tools, multi-step agents, retrieval (pgvector), deterministic evals, guardrails, prompt-injection tests, PII redaction, LLM failover, ONNX Runtime, PyTorch
AI coding agents: Claude Code and subagents, Codex, opencode, a DeepSeek harness; planner, manager and worker runs with acceptance checks
Languages: Python, TypeScript, SQL, Java, Go, Rust, C#
Backend and payments: FastAPI, PostgreSQL, Redis, idempotency, transactional outbox, optimistic concurrency, REST, gRPC
Cloud and quality: AWS (ECS, RDS, S3, SQS), Docker, GitHub Actions, pytest, Playwright, k6, OpenTelemetry

Education and Certification

M.S. Computer Science, University of Minnesota Duluth, 2023 – 2025, GPA 4.0, Graduate Summer Research Fellowship 2024 and 2025
B.Tech Computer Science and Engineering, IIIT D&M Kancheepuram, 2019 – 2023
AWS Certified Solutions Architect, Associate, Feb 2025 – Feb 2028 (verifiable on Credly)
